

SHELF LIFE STATEMENT

Product name	Maleic Anhydride (liquid)
---------------------	----------------------------------

MOL branded Maleic Anhydride (liquid) products* have an estimated shelf life of 3 months from date of production, provided that appropriate storage conditions are ensured. Maleic Anhydride must be stored in a cool, dry, well ventilated storage area; preferably in tanks made of stainless steel in which constant temperature is maintained (55-65°C), under nitrogen pillow. Areas where there is high potential risk of fires must be avoided. The product must be very well protected from moisture and oxidizing materials.

Please be noted that due to the effect of atmospheric moisture on maleic anhydride, the solidification point may be reduced and the maleic acid content may exceed the specified limit if the material is stored for a considerable period under humid conditions.
